

HNS as an International Standard Framework

Advanced Slide Series

NIST

Establishing HNS as the structural foundation for global AI governance.

Aligning meaning, ethics, and interoperability across standards.

HNS as an International Standard Framework

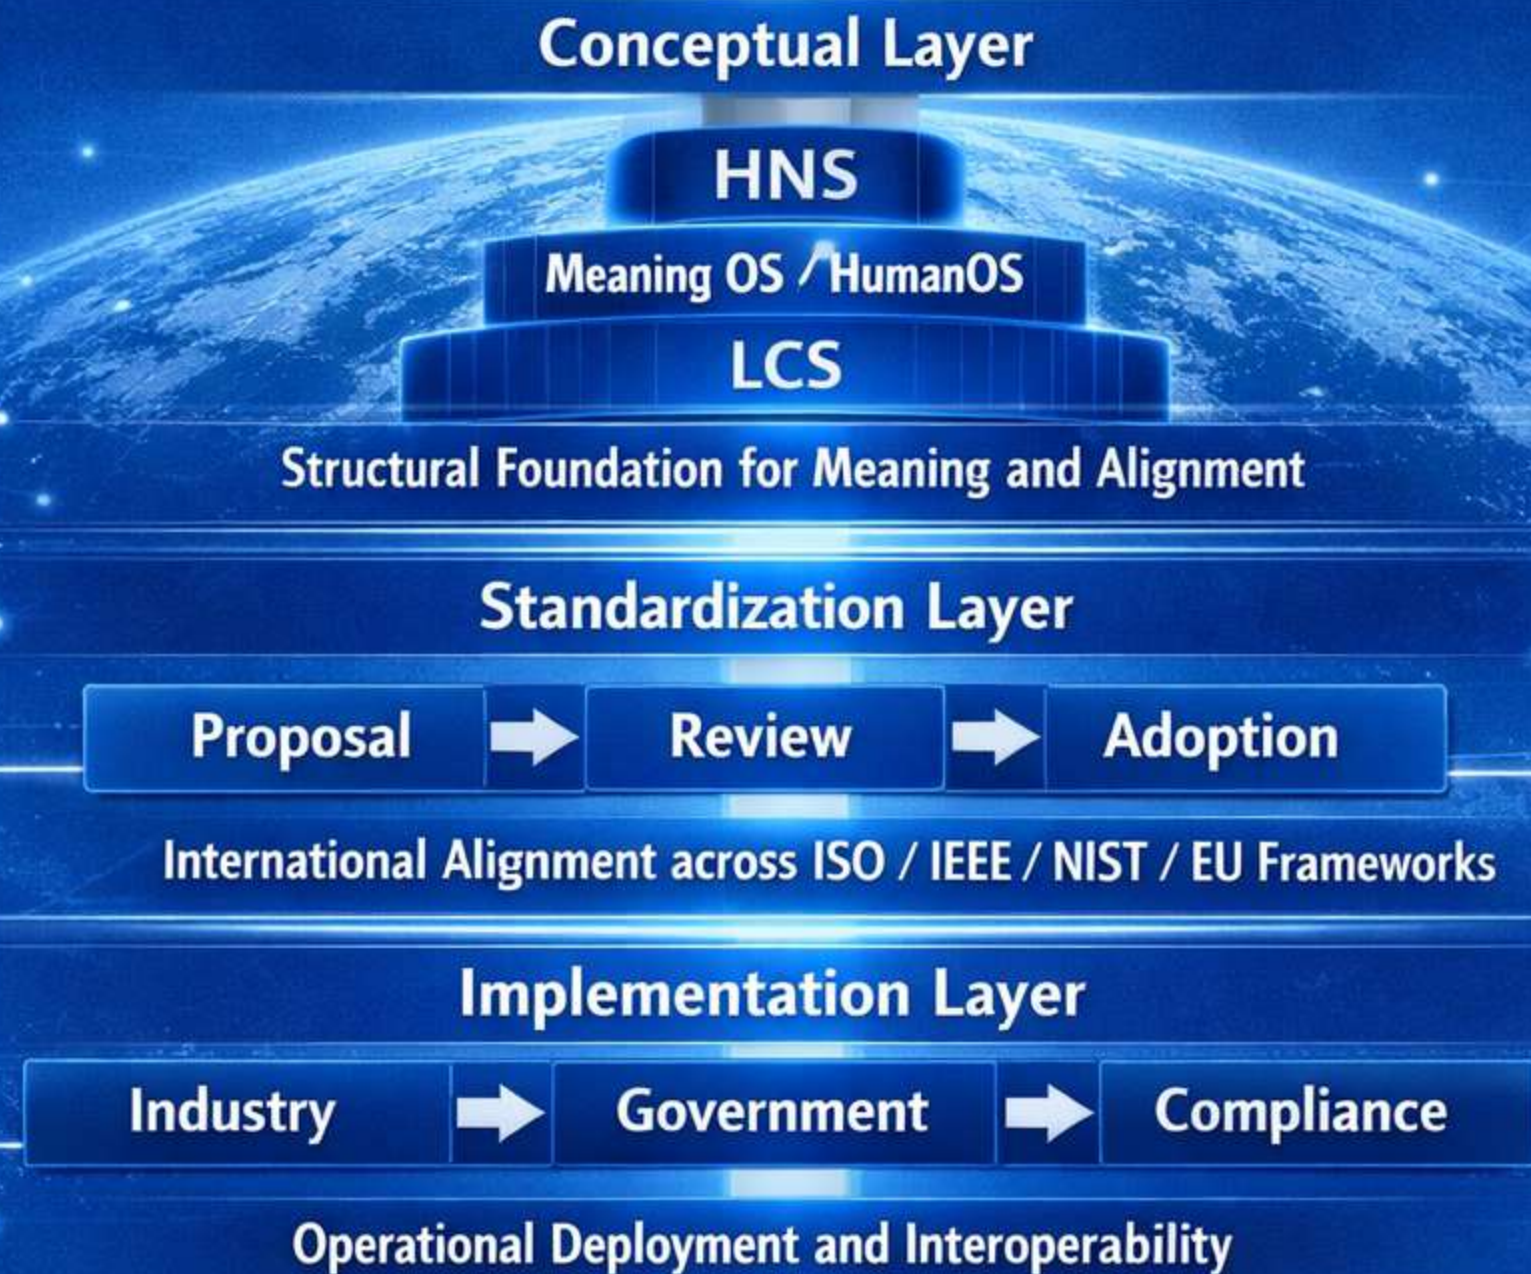

Framework Overview

HNS provides a unified structural OS across global AI standards.

Aligning meaning, ethics, risk, and law under one coordinate system.

HNS as an International Standard Framework — *Standardization Architecture*

HNS acts as the structural foundation for international AI governance.

Standardization ensures interoperability and ethical alignment.

From conceptual architecture to global implementation.

International Standards Reference

ISO/IEC, IEEE, ITU, NIST

ISO/IEC Standards	IEEE Standards	ITU-T Standards	NIST Standards
• ISO/IEC 42001 – AI Management System • ISO/IEC 23894 – AI Risk Management • ISO/IEC 38507 – Governance of AI • ISO/IEC 22989 – AI Concepts & Terminology • ISO/IEC 23053 – AI Framework for Machine Learning • ISO/IEC 25010 – System & Software Quality Model	• IEEE 7000 – Ethical Design • IEEE 7001 – Transpercecy • IEEE 7002 – Data Privacy • IEEE 7010 – Well-being Impact Assessment • IEEE 7007 – Behavior Modeling	• ITU-T Y.2060 – IoT Overview • ITU-T F.748.5 – AI Service Framework • ITU-T Y.3172 – AI Functional Architecture • ITU-T Y.3173 – AI Model Evaluation	• NIST AI RMF 1.0 – Ai Risk Management • NIST SP 1270 – Bias in AI • NIST SP 800-55 – Security & Privacy

HNS – Meaning OS – LCS

Standards Mapping to HNS Architecture

HNS Layer	ISO/IEC	IEEE	ITU-T	NIST
HNS-36 Core Structure	22989 / 23053	7001	Y.3172	XAI
Meaning OS (HumanOS)	42001 / 23894	7000	F.748.5	AI RMF
LCS (Layered Coordinate System)	25010	7010	Y.2060	SP 800-53
HNS – Meaning OS – LCS				

Standardization Process

ISO/IEC JTC 1 / SC 42

Conceptual Standard HNS-36

**Architecture Standard
