

HNS Unified Glossary and Canonical Vocabulary v1.0

Core Terms for the Human Natural Structure and EVA-HNS Framework

Field	Value
Author	Satoru Hara / Natural Structure Works (NSW)
Version	v1.0
Status	Author-led reference document / not a formal standard
Related Corpus	Human Natural Structure Series (Six-Part Publication Set)
Date	2026-06-10

Status Notice. This document is part of the author's own research and publication program. It is not an ISO, IEC, SC42, IEEE, NIST, CEN/CENELEC, or governmental standard. It is provided as a structured reference for review, discussion, implementation planning, and future independent validation.

1. Purpose

This glossary defines the core vocabulary used across the Human Natural Structure six-part series, the EVA-HNS architecture, and the seven PoC package. Its purpose is to reduce terminology drift and support consistent citation, implementation, and automated interpretation.

2. Canonical Terms

Term	Definition
HNS	Human Natural Structure; the structural coordinate and operating framework for modeling human understanding and AI-output verification.
SOHU	Structure of Human Understanding; the theoretical foundation for human understanding, meaning, reasoning, and structural alignment.
EVA	External Verification Architecture; an independent verification layer that audits AI outputs using HNS coordinates and grounding checks.
ECS	External Control System; a control layer intended to enforce or escalate safety decisions based on verification outputs.
LCS	Life Cycle Structure; a lifecycle-oriented governance layer for AI-system evaluation and deployment context.
MAV	Multi-Axis Verification; the hypothesis that reliability improves when generation, structure, and grounding are checked through distinct axes.
Axis 1	Stochastic/generative axis; the base model or generative process.
Axis 2	Structural/causal axis; HNS-36/144/864 coordinate verification.
Axis 3	Grounded/executive axis; SMS-6 grounding and contextual verification.
HNS-36	A 6 x 6 base coordinate matrix using Natural Layers and Abstract Categories.
HNS-144	An observational extension of HNS-36 using four onto-modal quadrants.
HNS-864	An analytical extension of HNS-144 using six inference and control operators.
SMS-6	Social Meta Structure six-layer grounding stack; a parallel Axis 3 layer, not a multiplicative extension of HNS-864.
EVA Audit Log	A structured record describing what was checked, which coordinate was used, what verdict was reached, and why.
Conformance	A checklist-oriented determination that specified HNS/EVA verification artifacts were produced.

3. Structural Failure Types

Failure Type	Definition
Layer Jump	Traversal across meaning layers without explicit bridge or intermediate reasoning.
Category Ambiguity	Conflation of conceptual categories such as subjective/objective, necessary/contingent, fact/value, or process/state.
Scope Drift	Departure from the intended question, task, domain, or operational boundary.
Metaphor Contamination	Figurative expression displacing literal structural, causal, or operational interpretation.
Unsupported Causality	Causal assertion without sufficient mechanism, intervention evidence, or admissible causal path.

4. HNS-864 Operators

Operator	Definition
O1 Conditioning	Association-level inference, such as $P(Y X)$.
O2 Intervention / do-operator	Intervention-level inference, such as $P(Y do(X))$.
O3 Counterfactual	Retrospective counterfactual inference.
O4 Reference Signal	Reference invariant in control-loop evaluation.
O5 Comparator / Error Detection	Comparison between reference and perception or expectation and output.
O6 Output Attenuation	Engineering regulator that reduces, blocks, or flags structurally ungrounded output.

5. SMS-6 Layers

Layer	Definition
SMS-1 Somatic	Bodily, physical, ergonomic, or embodiment grounding.
SMS-2 Protocol	Communicative intelligibility and interaction protocol grounding.
SMS-3 Organizational	Organizational, collaborative, and operational-scope grounding.
SMS-4 Economic	Resource, value, and information-equivalence grounding.
SMS-5 Governance	Rule, policy, compliance, and institutional grounding.
SMS-6 Universal	Systemic, civilizational, or universal-consistency grounding.

6. Usage Guidance

- Use EVA-HNS when referring to the combined full-stack architecture for external AI verification.
- Use HNS when referring to the structural coordinate and human-structure framework.
- Use SMS-6 as a parallel grounding axis, not as HNS-864 x 6.
- Use auditability as the most secure current claim unless third-party validation has been completed.
- Distinguish author-led demonstration, independent validation, and formal standardization status.
